One little problem

From Mohideen and Roy,
PRL 81 (1998) 4549

This is due to increased coupling of scattered light into the diodes from the approaching flat surface.

One little problem that shows up again

From Mohideen and Roy,
PRL 81 (1998) 4549

Fiber-top technology: is it useful?

davide iannuzzi

vrije Universiteit
amsterdam

Research
laboratories

SENSITIVE: based on optical interference

FLEXIBLE: working principle is not affected by the surroundings

COMPACT: just on the tip of a fiber

EASY-TO-USE: "plug-and-play" design

PORTABLE: readout in small volumes and light weight

Fiber-top technology: is it useful?

CASIMIR FORCE MEASUREMENTS

Considerations on the spring constant

$$k = \frac{1}{4} E w \left(\frac{t}{L} \right)^3$$

Young Modulus:

SiO_2 : $E = 73$ GPa

Si: $E = 170$ GPa

Si_3N_4 : $E = 385$ GPa

However...

$w > 10 \mu\text{m}$

$L < 100 \mu\text{m}$

$t > 4 \mu\text{m}$

$k \gg 10$ N/m

Can we decrease the spring constant?
